1.
Task：

Kevin:　　　　Group work & login
Yichen:　　　　Coordinate Testing，Update CSS (different screens & improve UI)
Ethan:　　　　Jest
Jiahang:　　　　Cypress
Jiaming:　　　　Cypress
Bo:　　　　　Translate web
Yolanda:　　　　documentation, JSDoc comment
Guo:　　　　Translate comment

2.
Current Condition：

Testing：

JS files of Jest and Cypress has been separated，but Jest on main branch is not the newest.

Jest：progression is much faster than Cypress，but need Ethan to update test cases timely to main branch.

Cypress：because cannot click Settings in login，cypress tests are all crashed by now. Need first change to local host，then mimic user's behavior.

Comment：

Need people (Yolanda) to organize comment，change order of functions / vars，write JSDoc comment

Features:

Login & group work: almost finished，but how to test?: test buttons

Translation: follow the progression of features，now need to translate group work

UI：make inputs not like buttons, <radio> -> <select>?, Size on different screens

Documentation:

Remember the Individual retrospective video, 12 due。
standup before every midnight

Suggestion:

Spread tasks
Improve individual's decision-making and control
Share setbacks timely and publicly
Everyone need to make some commits everyday

3.
Testing：

Jest：Variable & function

Theme：functionality

Finished：timeToSec，secToTime；fillColor，drainColor；incrementCoin，setShopItems，setActive；turnLight (fix color 256)，turnDark (fix color 256)

Not Passed：

loadActive (fix localStorage): set background -> refresh page -> test
updateTable (half done)
changeMode (add more expect stmt to each test)
countDown (questionable)
autoSwitchMode (not working)
runCounter (not working)：Maybe because of delay

Unfinished：

Cypress：Settings & Shop / Button & Event listeners

write a readme like jest，include way to test，tests passed，and tests need to write

Theme：mimic user's behavior

Not Passed：

set volume

Unfinished：

mimic one round of user behavior
